

Retrofit Socket Adapters

DESCRIPTION

These Retrofit Socket Adapters allow the user to replace existing Westinghouse, ABB, GE, Ametek (JEM), Schlumberger, Landis+Gyr (Siemens), or other switchboard meter with a new electronic socket meter. This replacement can be done in minutes without de-energizing the circuit or re-wiring anything. Easy installation translates into lower labor costs, which makes the meter upgrade feasible for many applications.

With these retrofit packages, you can cost-effectively offer your customer the newest metering technology without shutting down the circuit or being concerned about miswiring or handling asbestos wiring. Once this retrofit has been installed, your customer will have the benefit of a standard socket interface for any future meter testing or upgrades. Many utilities have already standardized on socket meters, taking advantage of lower costs and simplified maintenance. Using socket meters eliminates the need to stock or maintain more than one type of metering package.

- **Easy Installation. No re-wiring or de-energizing**
- **Cost-effective solution for upgrading old metering.**
- **Retrofits into existing switchboard meter cases**
- **Simplifies maintenance, testing and replacement.**
